

M1 Waveform Viewer™

by ASA Corp.

View/share/explore your scope & EDA waveforms anywhere

M1 Waveform Viewer™ is ASA's award-winning software that let's you **view/share/explore oscilloscope- or EDA-acquired waveforms** long after you have left the lab... in a conference room, on a plane, or in your kitchen. A rich set of built-in measurements makes it simple to compare multiple waveforms, and the integrated email client allows you to send a fully explorable waveform (not just a picture) to remote colleagues. If they don't have M1 Waveform Viewer, they can download and install it in about 20 seconds by just clicking on a link in the email.

Applications

- **Understand** - Examine, measure & compare waveforms
- **Collaborate** - Exchange *informed* technical opinions... accelerate your workflow..
- **Communicate** - Let your team/customers/suppliers know about an issue
- **Clarify** - End struggling with pictures & poor verbal explanations... send fully explorable *waveforms*.
- **Document** - Archive M1-WV files so you can go back and check your device without having to re-fix-ture when new issues come up.

Features

- **Zero cost** - Instant download. Installs in seconds.
- **Save/share** waveforms from **all your scope-types (A-T-L-Y-RS) and EDA tools** in a common data format
- **View/explore** waveforms anywhere... just as you would on the scope
- **Collaborate** - Share waveforms and the tool itself instantly via embedded email capability
- **22 built-in waveform measurements** (e.g. t_{rise} , t_{fall} , period, etc.)
- Complete statistics on all measurements... more than you'll find in any scope!
- Explore/compare multiple waveform cases simultaneously
- Winner of EETimes Ultimate Product Award
